Leveraging AI to Support Customers' Digital Transformation

ABEJA is engaged in the digital platform business to support customers' digital transformation activities. The company offers integrated services ranging from constructing an AI system that leverages deep learning technology, based on customers' business process data, on its proprietary ABEJA Platform, to operating the system. ABEJA is an affiliate of Sompo Holdings, with sales to this company ranging from slightly over 30% to just under 40% of total net sales.

ABEJA Platform is a software suite that offers processes from data generation, data collection, data processing and data analysis to AI modeling necessary for the execution of digital transformation. It operates continuously and stably in cloud environments such as Google Cloud Platform (GCP) and Amazon Web Services (AWS).

Client companies can accumulate the data needed to construct an AI system on ABEJA Platform. Data processing and other functions will be performed in an environment featuring computing resources and guaranteed security. Integrating such data with AI models enables and facilitates the construction of AI systems such as attribute estimation, anomaly detection and more, instead of building them from scratch. In fiscal year ended August 2022, sales related to ABEJA Platform accounted for 83.6% of total net sales.

Business Model

Sales are categorized into the transformation field and operation field, with the former accounting for 84% of net sales and the latter for 16% in fiscal year ended August 2022.

ABEJA Platform-related sales accounting for the majority of the transformation field net sales, consist of consulting services which include formulation of overall strategies for the promotion of digital transformation, construction of AI systems on ABEJA Platform, integration with existing systems and training of digital human resources, establishment of organizations to promote digital transformation and more.

The operation field net sales consist of ABEJA Platform usage fees during the construction of AI systems as well as after the systems become operational, income from ABEJA Insight for Retail, a service for retail businesses that operate on ABEJA Platform, and other offerings. For the operation field, the company receives monthly usage fees and other revenue.
